SMART CITY DELIVERY

Finding:

Only 20% of projects fully delivered despite 53% of total budget already utilized. New Bhopal received 3x more investment than Periphery zones.

Risk:

22 out of 25 projects are either Ongoing, Delayed or Not Started.

Recommendation:

Prioritize completion of delayed Transport and Water projects in Old Bhopal. Increase budget allocation for Periphery zones to ensure equitable Smart City development.

HEALTHCARE ACCESS

Finding:

City average is only 1.78 beds per 1000 population — well below WHO guideline of 5. Periphery zone has critically low healthcare access with minimal hospital presence. Old Bhopal wards like Budhwara and Char Imli show under 0.4 beds per 1000 people.

Risk:

Large population wards in Old Bhopal and North Bhopal remain severely underserved with no hospital access.

Recommendation:

Urgently establish at least 2 new hospitals in Periphery and Old Bhopal zones. Convert high-performing PHCs to CHCs in underserved wards as immediate relief.

ENVIRONMENT & LAKES

Finding:

Bhopal's Winter AQI averages 174 — classified as Poor. Monsoon months drop to safe levels showing strong seasonal pattern. Lower Lake records Heavily Polluted months regularly while Upper Lake remains cleaner.

Risk:

89 Unhealthy air quality days recorded. Lower Lake's dissolved oxygen consistently near minimum safe threshold.

Recommendation:

Implement winter-specific emission controls in North & Old Bhopal industrial zones. Accelerate Upper Lake Rejuvenation Project and extend similar program to Lower Lake.

CITIZEN GRIEVANCES

Finding:

560K complaints recorded over 5 years with only 64.43% resolution rate — meaning 199K complaints remain unresolved. Water Supply takes the longest to resolve averaging 9+ days per complaint. Complaint volume is rising year over year with no signs of reduction.

Risk:

Roads & Potholes and Water Supply — both High Priority categories — have the worst resolution times in the city.

Recommendation:

Deploy dedicated fast-track teams for Water and Roads complaints in Old Bhopal. Introduce ward-level accountability targets with monthly resolution rate reporting.

Overall Assessment: Bhopal shows strong Smart City ambition but execution gaps remain across all 4 dimensions.
